AI COPILOT ANALYSIS & HUMAN DECISION (FR-2, FR-6)

AI VERDICT: TRUE POSITIVE | Confidence: 88% | Gemini 2.5 Flash • 2.1s

CRITICAL SAFETY FLOOR ENFORCED (SRS FR-3)

Rule Level >= 12 on Tier-1 Crown Jewel host. System safety policies prohibit automated closure.
Mandatory human sign-off required.

AI TRIAGE SUMMARY & CITATION GROUNDING:

Procdump64.exe executed from temp path targeting lsass.exe process memory.
Access mask 0x1010 confirms an unauthorized memory read attempt matching known credential harvesting behavior (MITRE T1003.001). Zero legitimate admin justifications found.

RECOMMENDED MITRE CONTAINMENT PROTOCOL (ADVISORY ONLY):

1. Isolate endpoint CORP-DC-01 via SOC network quarantine.
2. Revoke active Kerberos TGT tickets for user CORP\admin_svc.

MATCHED FEW-SHOT EXEMPLAR #EX-104 (Similarity: 94%):

Tier-1 DC credential dump verified as TRUE POSITIVE by Lead Analyst on 2026-09-14.

ANALYST DECISION & AUDIT RATIONALE (FR-6):

Rationale is mandatory (>= 10 characters required):

Confirmed malicious procdump execution on DC. Quarantining host per playbook.

75 / 10 chars (Valid)

Approve (<= 2-Click) | Override (Drawer) | Escalate to Lead | Close Inspector

SCREEN 4: TEAM LEAD AGREEMENT & AUDIT DASHBOARD (TeamLeadAnalyticsView.tsx)
